

Exact Technical Requirements

Hardware

Exact runs on any browser on any device. Most subscribers use a PC or Mac with a full keyboard, but Exact can also be accessed using a tablet, such as iPad, or even your phone. Many users of Exact perform the more complex functions on their regular computers, but also access Exact in the field using their phone or tablet for quick functions such as recording time and case notes.

Browser software

Exact runs on any Internet browser, such as:

- Internet Explorer
- Chrome
- Edge
- Safari
- Firefox

No special software is required to operate Exact and print checks.

Forms software

To use the Forms feature of Exact, in which client data can be merged with documents, you will need Microsoft Word (2010 or higher). Microsoft Word or Microsoft's Free Word Viewer can be used on any Windows PC or Apple computer to view and print the forms. Editing and creating new forms requires a Windows PC. If you do not have a Windows PC and need to create forms, contact Exact Support.

Printer

You can print on any printer. We recommend a laser printer because Inkjet printing is not fully-waterproof. Most of the banking industry no longer requires MICR ink. Check with your bank to see if MICR is still required, and if so, you will need to ensure your printer can print using the magnetic ink cartridge.

Check Stock

Most Exact subscribers use 3-to-a-page pre-printed check stock. Exact also supports single check-plus-voucher pages and z-fold check.

Minuteman Press in Puyallup is our recommended vendor for 3-to-a-page check stock, although you may use any vendor of your choice. They have all of the specifications for Exact.
